

A solid partner for a durable investment

Short description:

Founded in 2002, **GreenSoft** is a software service provider capable of incorporating innovation and technology from artificial intelligence with the purpose of improving client competitiveness on the open market.

GreenSoft creates value. Through productivity increase and operational cost reduction due to customized applications, we offer niche solutions for companies in areas where standard solutions do not offer competitive advantages. Greensoft treats any request from clients as a challenge for new applications and is capable through its research and development department to offer unique pilot solutions.

The culture and spirit of the team members form the base of our commitment towards the clients, which forms our most important and competitive advantage.

In one word, optimization is what **Greensoft** does best.

Expertize and experience:

Greensoft is specialized in developing customized applications in domains such as electrical energy distribution, waste management, railway transport of petroleum products, SCADA, hardware peripheral integration, GIS, which also include optimization components and processing modules of artificial intelligence based on neural networks, genetic algorithms, fuzzy systems and petri networks.
