

WHO WE ARE?

Founded in 2002, **Greensoft** is one of the software service providers capable of incorporating innovation and SAP services customizing with the goal of increasing client competitiveness on the market.

The company is providing tailored solutions integrated with SAP Portal, SAP ERP and SAP IS-U in a wide range of domains: railway traffic, electrical energy, public administration, medical services, financial services and call center.

Greensoft solutions

International Experience

Greensoft has provided a worthy and creative solution for maintaining and extending the national invoicing of electrical energy consumption in the Albanian Republic a country of 1.3 mil consumers. During the support phase, technical workflows were designed regarding client payment processing (through banks or systems, payment matching and reading electricity meters). Another major component dealt with analyzing the accuracy of inputted data in the system, followed by taking the necessary corrective actions and ending with the invoicing process. Furthermore the invoice generation in printable format for the whole portfolio was paid special attention to, due to the major impact it had on the company.
